

# 水循環

## The Water Cycle

小朋友，請參考左邊有關「水循環」的關鍵字，在適當的空格內填上正確名稱，並為美麗的世界填上顏色。

Kids, please fill in the blanks with the given keywords of the water cycle on the left and colour the beautiful world.

### 水循環 Water cycle

水循環不息地在海洋、空氣和陸地間流動。水在大自然中的循環稱為「水循環」。

Water continuously moves through the atmosphere, into and out of the ocean and over the land. The cycle of water in the nature is called the water cycle.

#### 蒸發 Evaporation

地球表面的水(例如：海水)受太陽的照射，變成水蒸氣。

The Sun heats water on the surface of the Earth (e.g. sea water). Water changes into water vapour.

#### 凝結 Condensation

水蒸氣會升到天空中，遇冷後會變成小水點，聚集成雲。

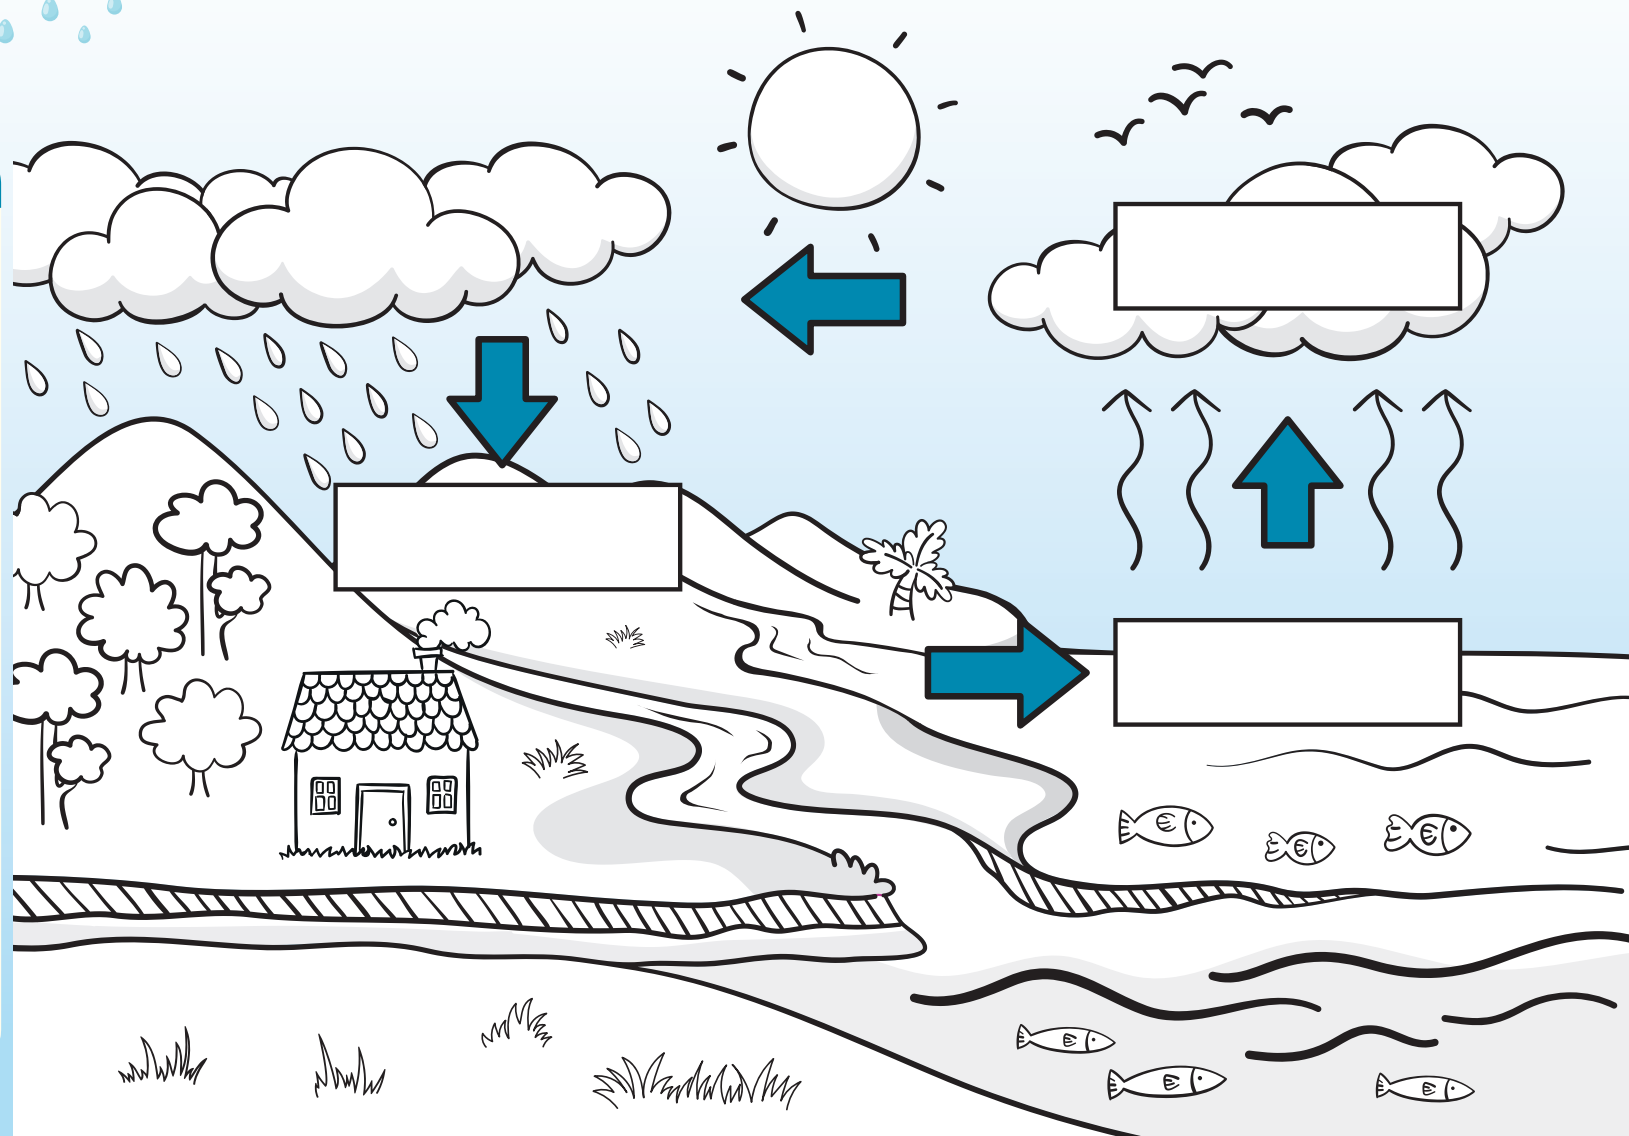

Water vapour rises to the sky and becomes little water drops. They form clouds.

#### 降雨 Raining (Precipitation)

大量的雲積聚起來，逐漸變重，形成雨水降下。

When clouds become big and heavy, they fall as rain.
